MARK SCHEME for the October/November 2015 series

9691 COMPUTING

9691/23

Paper 2 (Written Paper), maximum raw mark 75

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2015 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

® IGCSE is the registered trademark of Cambridge International Examinations.

Page 2	Mark Scheme		Paper
	Cambridge International AS/A Level – October/November 2015	9691	23

1 (a)

Field	Identifier	Data type Example of input data		Field size (in bytes)	marks
course code	CourseCode	STRING (not text/alphanumeric)	015110217 (approx.) (accept a range)		1
title	Title	STRING (not text/alphanumeric)	Programming for Beginners a rang		1
tutor (3-letter initials)	Tutor	or STRING (not text/alphanumeric) PGL 3/6			
day of week	Day	BYTE / INTEGER Accept CHAR/STRING(1)	2	1 / 4 1 / 2	1
lab based?	IsLabBased	BOOLEAN	TRUE	1 / 2	1
session duration in hours	SessionHours	REAL/FLOAT/SINGLE	2.5 4 /		1
fee (\$)	CourseFee	CURRENCY/FLOAT/DECIMAL SINGLE/REAL/DOUBLE	25.50 8 / 16		1
date course starts	StartDate	DATE/REAL (STRING)	03/11/2015 8 (10)		1
date course ends	EndDate	DATE/REAL (STRING)	03/12/2015	8 (10)	Ι

[max 5]

Page 3	Mark Scheme	Syllabus	Paper
	Cambridge International AS/A Level – October/November 2015	9691	23
(b) /	lark as follows:		
1	mark for correct record header		
1	mark for correct definition terminator		
1	mark for the first 5 fields defined correctly for language		
1	mark for the remaining 4 fields defined correctly for language		
Ľ	Do not accept pseudocode		
F	ield names must be as given, but ignore capitalisation/spaces		
Ľ	Declared program language must match code given		
le	gnore field sizes and data type		
li	f misused DIM in VB, penalise once		
li	f statement separators missing, penalise once		
_			
E	xample Pascal		
Τ	YPE CourseRecordType = RECORD		
	CourseCode: STRING[10];		
	Title: STRING[30];		
	Tutor: STRING[3];		
	Day: BYTE;		
	IsLabBased: Boolean;		
	SessionHours: REAL;		
	CourseFee: Currency;		
	StartDate: TDateTime;		
	EndDate: TDateTime;		
E	ND;		[4]

(c) Note that some candidates may already have done this in part (b). In that case, give marks according to part (b).

VAR Course : ARRAY[150] OF CourseRecordType	[2]
VAR DummyRecord : CourseRecordType	
WITH DummyRecord DO BEGIN	
CourseCode :='';	
Title := '';	[1]
Tutor := '';	
Day := 0;	
IsLabBased := FALSE;	
SessionHours := 0;	[1]
CourseFee := 0;	
StartDate:= 01/01/2010]	
EndDate := 01/01/2010	[1]
END;	
FOR i := 1 to 50 DO	[1]
Course[i] := DummyRecord;	[1]

Page 4	Mark Scheme	Syllabus	Paper
	Cambridge International AS/A Level – October/November 2015	9691	23
ŀ	Alternative:		
7	<pre>/AR Course : ARRAY[150] OF CourseRecordType</pre>		[2]
I	FOR i := 1 to 50 DO		[1]
	BEGIN		
	Course[i].Title := '':		[1]
	Course[i].Tutor := '';		
	Course[i].Day := 0;		
	Course[i].IsLabBased := FALSE;		[4]
	Course[i].Course Fee := 0;		[']
	Course[i].StartDate:= 0;]		
	Course[i].EndDate := 0;		[1]
	END; I		
	[1]		[may 6]
r	De not populice again for incorrect data tuna		[max 0]
L	to not penalise again for incorrect data type		
(d) (EOF() returns TRUE or FALSE depending on whether it found <u>the marker</u> at the end of the file 		[2]
(i	i) Mark as follows:		
	 Open file CourseData.DAT 		
	 for reading/input 		
	loop while not and of file CourseDate, DAT		
	 read record from file 		
	 assign to array element 		
	 correctly initialised and incremented index 		
	 Close file CourseData.DAT 		
	Example pseudocode:		
	OPENFILE CourseData.DAT for READING // for INPUT		
	$i \leftarrow 1$		
	WHILE NOT EOF(CourseData.DAT)		
	KLAD RECORD FROM FILE		
	$i \leftarrow i + 1$		
	ENDWHILE		
	CLOSEFILE CourseData.DAT		[max 6]

	Cambridge International AS/A Level – October/November 2015	9691	23
(e) M 	lark as follows: change outer FOR loop to a REPEAT/WHILE loop decrementing the iterations of the FOR loop introduce a Boolean variable NoSwaps (or similar) initialise Boolean variable correctly (inside outer loop and outside ir terminate REPEAT loop when no swaps made leave comparison and swapping code the same change upper limit of inner loop to NumberOfCourses – x (instea	nner loop) id of 49)	
E P	<pre>xample pseudocode: ROCEDURE SortData(NumberOfCourses) x ← 0 // NoSwaps ← FALSE (required for WHILE loop REPEAT // WHILE NoSwaps = FALSE x ← x + 1 NoSwaps ← TRUE FOR y ← 1 TO NumberOfCourses - x IF Course[y].CourseFee > Course[y + 1].Cour THEN NoSwaps ← FALSE TempRecord ← Course[y] Course[y] ← Course[y + 1] Course[y + 1] ← TempRecord ENDIF ENDFOR</pre>	o) seFee	
E	UNTIL NoSwaps = TRUE // ENDWHILE NDPROCEDURE		[max 6]

Page 6 Mark Scheme Syllabus Paper Cambridge International AS/A Level – October/November 2015 9691 23

2 (a) (i) Mark as follows:

- parameter
- Return data type
- Correctly formed CASE statement (including the end)
 with all cases present (characters in quotes)
 - ELSE clause
- Return of value (implied)

Example PASCAL

```
FUNCTION DenaryDigit(Letter : CHAR) : INTEGER;
   BEGIN
      CASE Letter OF
          'K': DenaryDigit := 0;
          'D': DenaryDigit := 1;
          'L': DenaryDigit := 2;
          'C': DenaryDigit := 3;
          'F': DenaryDigit := 4;
          'H': DenaryDigit := 5;
          'B': DenaryDigit := 6;
          'G': DenaryDigit := 7;
          'E': DenaryDigit := 8;
         'A': DenaryDigit := 9;
      ELSE
         DenaryDigit:= -1
      END;
   END;
```

(ii) ____

Letter	Expected result	Type of data (normal, borderline or invalid)
'1'	-1	Invalid (digit)
'X'	'X' –1 Invalid (le	
'G'	7	normal

1 mark per row

[3]

[max 5]

Page 7	Mark Scheme	Syllabus	Paper
	Cambridge International AS/A Level – October/November 2015	9691	23

(b) (i) Mark as follows:

1 mark per column (2 to 6) if zero marks then mark by row

CodedNumber	Denary	i	ThisChar	ThisNumber	OUTPUT
"LED"	0				
	20	1	L	2	
	100	2	E	8	
	110	3	D	1	110

[5]

[2]

(ii) line number 08

```
Denary ← Denary * 10 + ThisNumber
```

Do not accept concatenation of separate digits (unless they are CHAR/STRING)

(iii)	logic error	[1]
(iv)	Second and third mark dependent on first mark.	
	When and how interchangeable Type: – syntax error When: – during compilation of program // in IDE environment // running an interpreted program How: – reported by the translator diagnostics // highlights/stops at the statement with syntax error // compiler/interpreter checks against syntax rules / rules of the language Type: – run-time error	the

When: – during testing/execution

How: – program will 'crash' e.g. attempted 'divide by zero' error [6]

Page 8	Mark Scheme	Syllabus	Рар	er
	Cambridge International AS/A Level – October/November 2015	9691	23	\$
(c) (i)	 Meaningful variable names Capitalisation of keywords Empty lines Use of indentation Initialisation (of variables) Use of (library/built-in) functions Do not accept white space / camel case on its own.		[m:	ax 3]
(ii)	Comments/annotations/remarks			[1]
(iii)	1 mark per line of pseudocode correctly written in the high-level lar 1 mark for declarations: Example Pascal:	iguage chos	sen.	
	PROCEDURE ConvertToDenary(CodedNumber: STRING);		//	[1]
	ThisChar : CHAR;		//	[1]
	BEGIN			
	Denary := 0;		//	[1]
	FOR i := 1 TO LENGTH(CodedNumber)DO BEGIN		//	[1]
	ThisChar := MIDSTR(CodedNumber, i, 1);		11	[1]
	ThisNumber := DenaryDigit(ThisChar); Denary := Denary + ThisNumber * 10;			[1] [1]
	Accept 'corrected vers: END;	lon'	//	[1]
	WriteLn(Denary);		//	[1]
	END;		//	[1]
				[10]
(iv)	IF ThisNumber = -1 THEN output atetement giving the error message			
	 output statement giving the error message instead of OUTPUT Denary 			
	 exit from the loop 			[3]

	Page 9	Mark Scheme	Syllabus	Paper
		Cambridge International AS/A Level – October/November 2015	9691	23
3	(a) (Give credit for answers to "why" rather than "how".		
	(Set a breakpoint in the program code Execution will pause at this point 		[2]
	(i	 Stepping allows one statement to be executed at a time The program execution pauses after each statement Often used from a set breakpoint Can use variable watch at each step Stepping over to skip statements 		[Max 2]
	(ii	 i) Variable watch allows tester to see the current contents of a variab // Used to see how variable contents change when stepping throug Tester chooses variables to watch 	le h program	[2]
	(b) V	Vhite-box		[1]
