9701/33 March 2017

Paper 3 Advanced Practical Skills MARK SCHEME Maximum Mark: 40

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the March 2017 series for most Cambridge IGCSE<sup>®</sup>, Cambridge International A and AS Level components and some Cambridge O Level components.

® IGCSE is a registered trademark.

Question	Answer	Marks
1(a)	M1 unambiguous recording of volume of oxygen gas with unit	1
	M2 volume of gas within 10% of the supervisor's value	1
1(b)(i)	correctly calculates <b>V(a)</b> ÷ 150 to 2–4 sig. fig.	1
1(b)(ii)	correctly calculates $\frac{V(a)}{24.0 \times 1000}$ to 2–4 sig. fig.	1
1(b)(iii)	correctly uses (ii) × 2 AND answer to 2–4 sig. fig.	1
1(b)(iv)	shows working $\frac{(iii) \times 1000}{150}$ AND answer to 2–4 sig. fig.	1
1(c)(i)	$MnO_2$ in (ignition) tube/floating in weighing boat OR use a dropping funnel/syringe for $H_2O_2$ AND subtract the liquid volume	1
1(c)(ii)	$M1 \ \frac{0.5 \times 100}{50} = 1.0\%$	1
	$M2 \times 3 = 3.0\%$ (3.0 with no working shown scores [2].)	1
1(c)(iii)	(agree as) two readings to find volume of gas evolved are needed so there is twice the percentage error in the gas volume reading	1
1(d)	no change because MnO <sub>2</sub> /FA 2/solid is a catalyst	1

Question	Answer	Marks
2(a)	I initial and final burette readings and volume added recorded for rough titre AND accurate titre details tabulated	1
	<ul> <li>II initial and final burette readings recorded and volume of FA 3 added recorded for each accurate titration</li> <li>all headings and units correct for accurate titrations         <ul> <li>initial/final (burette) reading/volume OR reading/volume at start/finish</li> <li>titre OR volume FA 3 added/used</li> <li>(cm<sup>3</sup>) OR / cm<sup>3</sup> OR in cm<sup>3</sup> by every entry</li> </ul> </li> </ul>	1
	III all accurate burette readings are recorded to the nearest 0.05 cm <sup>3</sup>	1
	IV final titre within 0.10 cm <sup>3</sup> of any previous accurate titre	1
	<b>V</b> , <b>VI</b> and <b>VII</b> award <b>V</b> , <b>VI</b> and <b>VII</b> for $\delta \le 0.20 \text{ cm}^3$ award <b>V</b> and <b>VI</b> for $0.20 \text{ cm}^3 < \delta \le 0.30 \text{ cm}^3$ award <b>V</b> for $0.30 \text{ cm}^3 < \delta \le 0.50 \text{ cm}^3$	3
2(b)	<ul> <li>mean titre correctly calculated from clearly selected values:</li> <li>candidate must average two (or more) titres where the total spread is ≤ 0.20 cm<sup>3</sup></li> <li>working must be shown or ticks must be put next to the two (or more) accurate readings selected</li> <li>the mean should normally be quoted to 2 d.p. rounded to the nearest 0.01</li> </ul> Note: the candidate's mean will sometimes be marked as correct even if it is different from the mean calculated by the examiner for the purpose of assessing accuracy.	1
2(c)	M1 correctly calculates $\frac{0.030 \times (\mathbf{b})}{1000}$	1
	M2 correctly uses (i) $\times$ 5/2	1
	M3 correctly uses (ii) $\times$ 1000/25	1
	M4 all final answers to 3 or 4 sig. fig. (minimum two parts attempted)	1

estion	Answer					
		<b>FA 5</b> is C <sub>6</sub> H <sub>12</sub> O <sub>6</sub> (aq); <b>F</b>	A	<b>6</b> is (NH <sub>4</sub> ) <sub>2</sub> Fe(SO <sub>4</sub> ) <sub>2</sub> (aq); <b>FA 7</b> is NaNO	D <sub>2</sub> (aq)	
)(i)–(iv)	see below					
	test	FA 5		FA 6	FA 7	
(i) aqueous sodium hydroxide, then		no reaction / no ppt. AND		green ppt. <b>AND</b> insol in excess / turning brown <b>1</b>	no reaction/no change/no ppt.	
warm gently		solution turns yellow/yellow- brown/brown	1	gas/NH <sub>3</sub> turns (damp red) litmus (paper) blue <b>1</b>	no reaction/solution remains colourless	1
aluminium foil and warm		effervescence with FA 5 or FA 7	7	AND	gas / NH₃ turns (damp red) litmus (paper) blue	1
aqueo	idified ous potassium anate (VII)	no reaction AND		purple decolourises/solution turns yellow <b>AND</b>	purple decolourises/turns colourless	1
warm	gently	purple decolourises/turns colourless	1			
(iii) hydrogen peroxide				solution turns yellow/ effervescence <b>AND</b>	no reaction/no change	1
	ide					
	ide			gas relights glowing splint 1		
perox	ydrochloric				brown gas/colourless bubbles/g turning brown in air/blue solution	

Question	Answer						
3(b)(i)		cation(s)	anion(s)	3			
	FA 5	unknown	unknown				
	FA 6	Fe <sup>2+</sup> /iron(II) and NH <sub>4</sub> <sup>+</sup> /ammonium	SO <sub>4</sub> <sup>2-</sup> /sulfate				
	<b>FA</b> 7	unknown	$NO_2^-/nitrite$				
3(b)(ii)	clearly shows the reagent and expected observation(s)						
	add NH <sub>3</sub> AND green ppt. AND insoluble in an excess of ammonia/turning brown (on standing)						
3(b)(iii)	Fe <sup>2+</sup> (aq) + 2OH⁻(aq) - <b>OR</b>	$\rightarrow$ Fe(OH) <sub>2</sub> (s)		1			
	$[Fe(H_2O)_6]^{2+}(aq) + 2NH_3(aq) \rightarrow [Fe(OH)_2(H_2O)_4](s) + 2NH_4^+(aq)$
