

Cambridge International Examinations

Cambridge International Advanced Subsidiary and Advanced Level

CANDIDATE NAME									
CENTRE NUMBER					CANDIDATE NUMBER			_	
CHEMISTRY							9701/2	2	
Paper 2 AS Lev	el Structu	ured Questi	ons		October/November 2016				
						1 hour	15 minutes	s	
Candidates ans	wer on th	e Question	Paper.						
Additional Mater	rials:	Data Book	let						

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

A Data Booklet is provided.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

Answer **all** the questions in the spaces provided.

1

	·
(v)	Use your answers to (a) and (b)(iv) to calculate the amount, in moles, of hydrochloric acid that reacted with the $0.50\mathrm{g}$ sample of M .
	anaunt - mal [4]
	amount = mol [1]
(vi)	Use your answer to (\mathbf{v}) and equation 1 to calculate the amount, in moles, of \mathbf{M} in the 0.50 g sample.
	amount = mol [1]
(vii)	Calculate the relative atomic mass, $A_{\rm r}$, of M and identify M .
	A_{r} of M =
	identity of M =[2]
	[Total: 9]

2 Dinitrogen tetraoxide, N_2O_4 , and nitrogen dioxide, NO_2 , exist in dynamic equilibrium with each other.

$$N_2O_4(g) \rightleftharpoons 2NO_2(g)$$
 $\Delta H = +54 \text{ kJ mol}^{-1}$

The energy profile for this reaction is shown.

- (a) Add labelled arrows to the energy profile to indicate
 - the enthalpy change of the reaction, ∆H,
 - the activation energy of the forward reaction, E_a.

[2]

- (b) $0.0500 \, \text{mol}$ of N_2O_4 was placed in a sealed vessel of volume $1.00 \, \text{dm}^3$, at a temperature of $50 \, ^{\circ}\text{C}$ and a pressure of $1.68 \times 10^5 \, \text{Pa}$. The mass of the resulting equilibrium mixture was $4.606 \, \text{g}$.
 - (i) Calculate the average molecular mass, M_r , of the resulting equilibrium mixture. Give your answer to **three** significant figures.

$$M_{r} = \dots [2]$$

(ii) The number of moles of N_2O_4 that dissociated can be represented by n.

State, in terms of n, the amount, in moles, of NO_2 in the equilibrium mixture.

moles of
$$NO_2$$
 =[1]

The	e number of moles of N_2O_4 remaining at equilibrium is $(0.05 - n)$.
(iii)	State, in terms of n , the total amount, in moles, of gas in the equilibrium mixture.
	[1]
(iv)	State, in terms of n , the mole fraction of NO_2 in the equilibrium mixture.
	[1]
In t	his equilibrium mixture, the mole fraction of NO ₂ is 0.400.
(v)	Use your answers to (ii) and (iv) to calculate the amount in moles of each gas in the equilibrium mixture. Give your answers to three significant figures.
	amount of N ₂ O ₄ = mo
	amount of NO_2 = mo [2]
(vi)	Write the expression for the equilibrium constant, K_p , for this equilibrium.
. ,	
	$K_p =$
	[1]
(vii)	Use the total pressure of the mixture, 1.68×10^5 Pa, to calculate the value of the equilibrium constant, K_p , and give its units.
	$K_{p} = \dots$
	units =
	[3]

[Total: 13]

- 3 The Periodic Table is arranged such that the properties of the elements show a number of trends.
 - (a) A plot of the first ionisation energies for the first 18 elements is shown.

(i)	Explain why the values show a general increase from atomic number 11 to 18.
	rol
	[2]
(ii)	Explain the decreases in first ionisation energies between
	atomic numbers 12 and 13,
	atomic numbers 15 and 16.
	[4]
(iii)	Suggest an explanation for the trend in the first ionisation energies of the elements with atomic numbers 2, 10 and 18.

(b) A plot of the melting points of the elements across the third period is shown.

(i)	Explain the increase in melting point from atomic number 11 to 12.
	[2]
(ii)	Suggest a reason why the increase from atomic number 12 to 13 is much smaller than the increase from atomic number 11 to 12.
	[1]
(iii)	State and explain the pattern of the melting points from atomic number 15 to 18.
	[3]
iv)	Explain why the element with atomic number 14 has a melting point so much higher than the rest of the elements in the third period.
	[1]

4			section of this question the structural formula of an organic compound is shown. For early answer the questions about it.	ach
	(a)	CH	3CH ₂ CHBrCH ₃	
		(i)	Name this compound.	
		/ii\		[1]
		(ii)	This compound shows stereoisomerism.	
			Draw the two stereoisomers in the conventional way.	
				[2]
		(iii)	Give the structures of three other structural isomers of C ₄ H ₉ Br.	<u>-</u> -1
	,	(<i>,</i>		
				[2]
	(b)	(C I	J) CPr	[3]
	(D)		H ₅) ₃ CBr	
		(i)	Name this compound.	F41
		(ii)	$(C_2H_5)_3CBr$ reacts with aqueous OH $^-$.	ניו
			Complete the mechanism for this reaction including all necessary curly arrows, charge partial charges and lone pairs.	jes,
	CH ₃	CH ₂		
CH	3CH ₂	<u>,</u> c—	-Br 	
	CH ₃	CH ₂		
				[3]
		(iii)	What type of mechanism occurs in (ii)?	
				[1]

(c)	CH	3CH2CH2CHBrCH3		
	(i)	Give the reagents mixture of alkenes	and conditions necessary for the co	nversion of this compound into a
				[2]
	(ii)	Give the name of	the mechanism for the conversion in (i).
				[1]
	(iii)	Draw the skeletal	formulae of the three alkenes produce	ed by the conversion in (i).

[3]

[Total: 17]

In e	ach	section of th	ns question	n cnoos	se the a	nswer o	ranswer	s from the options listed.	
(a)	Six	particles are	e listed.						
			Н∙	H⁺	Cl•	C <i>l</i> -	•CH ₃	⁺ CH ₃	
	(i)	Identify two of UV light.		produce	ed durin	g the rea	action of r	nethane and chlorine in the p	resence
									[1]
	(ii)	Identify the	two partic	cles pro	duced b	y the he	eterolytic	fission of a bond in chlorome	ethane.
									[1]
(b)	Sev	en reaction	types are	listed.					
			addition	subs	stitution	oxid	ation	elimination	
			hydr	olysis	cond	lensatio	n red	uction	
	(i)	Name the t	vne of rea	ction in	volved v	vhen To	llens' rea	gent is used to identify an ale	
			, po 01 10a					gent is used to identify an air	dehyde.
			• •						·
	(ii)								[1]
	(ii)	Name the t	ype of rea	ction in	volved i	n the tes	st for a ca		[1] PH.
((ii) (iii)	Name the t	ype of rea	ction in	volved i	n the tes	st for a ca	arbonyl group using 2,4-DNP	[1] PH.
(Name the t	ype of ready	ction in	volved i	n the tes	st for a ca	arbonyl group using 2,4-DNP	[1] PH. [1]
		Name the t	ype of rea	ction in	volved i	n the tes	et for a ca	arbonyl group using 2,4-DNP	[1] PH. [1]
	(iii)	Name the t	ype of readype of readype of readype of readype	ction in	volved i	n the tes	action of	arbonyl group using 2,4-DNP a ketone with NaBH ₄ .	[1] PH. [1]
