#### UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Advanced Subsidiary and Advanced Level

### MARK SCHEME for the November 2004 question paper

### 9698 PSYCHOLOGY

9698/02 Paper 2 (Core Studies 2), maximum raw mark 50

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which Examiners were initially instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published *Report on the Examination*.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the *Report on the Examination*.

• CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the November 2004 question papers for most IGCSE and GCE Advanced Level syllabuses.

**Grade thresholds** taken for Syllabus 9698 (Psychology) in the November 2004 examination.

	maximum	minimum	mark required	for grade:
	mark available	A	В	E
Component 2	50	40	37	21

The thresholds (minimum marks) for Grades C and D are normally set by dividing the mark range between the B and the E thresholds into three. For example, if the difference between the B and the E threshold is 24 marks, the C threshold is set 8 marks below the B threshold and the D threshold is set another 8 marks down. If dividing the interval by three results in a fraction of a mark, then the threshold is normally rounded down.

November 2004

GCE AS/A LEVEL

# MARK SCHEME

## MAXIMUM MARK: 50

SYLLABUS/COMPONENT: 9698/02

PSYCHOLOGY

Core Studies 2

### Section A

Question	Description	Mark	Max
1a	The verb <i>smashed</i> elicited the highest estimations of speed followed by the other verbs with <i>hit</i> eliciting the lowest estimations of speed. 2 marks for detailed answer with reference to specific verbs.	2	
1b	Hard to measure, cannot see cognitive processes, ethnocentric measurement, ecological validity, with description. 2 marks.	1+1	4
2a	They were suffering from epilepsy (1 mark), splitting the brain helped to contain the epilepsy in one hemisphere (2 marks).	1+1	
2b	Epilepsy may have changed the participant's brain structure making it different from people without epilepsy. The function of each hemisphere may adapt after being split and may not resemble 'normal' brain functioning. 2 marks for a detailed answer.	2	4
3	Reasons include; the horse resembled his father, projection of his dislike for his father onto a safer object, unresolved conflict, phallic symbol for his father.	2 + 2	4
4a	Reference to either psychological or physiological harm e.g. stress from injection, stress from symptoms of adrenaline especially ignorant and misinformed conditions, deception. 2 marks for explanation.	2	
4b	To avoid demand characteristics and obtain valid results. 2 marks for detailed explanation.	2	4
5	Cannot generalise from one person, no one to compare with, ethics, too much involvement. Any 2 examples 2 marks for each with explanation.	2+2	4

### Partial/full answer

0 marks	No answer <b>or</b> incorrect answer.
1 mark	Partially correct answer or correct but incomplete lacking sufficient detail or
	explanation to demonstrate clear understanding.
2 marks	Correct answer with sufficient detail/explanation to demonstrate clear
	understanding.

### Section B

6a         What do these studies tell us about how behaviour is influenced by other people? Hodges and Tizard (relationships) Piliavin, Rodin and Piliavin (subway Samaritan) Hraba and Grant (racial identity) Milgram (obedience)           Emphasis on study. Answers must be related to named studies. One point from each study.           Indicative content: Hodges and Tizard – the importance of a stable caregiv the early years and of forming attachments on the quality of our relationship later life. Piliavin – the characteristics of the victim affects our willingness to in an emergency, the study does not show diffusion of responsibility or defin effects of seeing others help. Hraba and Grant –the attitudes of others e.g. society can affect the way we feel about ourselves. Milgram – we show favouritism to people who we perceive to be in our group and discriminate against people in the out group.           For each point up to a maximum of FOUR points           For each point up to a maximum of four studies No answer or incorrect answer.           Identification of point relevant to question but not related to study or comment from study but no point about how behaviour is influenced by other people.           Description of point about how behaviour is influenced by other people from study (comment without comprehension). As above but with analysis (comment with comprehension) about how behaviour is influenced by other people?           Emphasis on problem. Answers supported with named (or other) studies Each problem does not need a different study; can use same study. Indicative content: ecological validity, demand characteristics, ethics, valid measurements, sample size, ethnocentric bias etc.           For each point up to a maximum of FOUR points	Mark	Description	Question

To what extent do Social approaches in psychology explain all behaviour and experience? Give reasons for your answer. Emphasis on point. Answers supported with named study (or other) studies/evidence. or two general statements which may be inaccurate, incomplete or dled. eral statements are made which are focused on the question but are c, lacking in detail and have no supporting evidence. For four marks e may be general statements with anecdotal evidence or vague ence to supporting psychological evidence. mber of points are made which are focused on the question and are really accurate. There is some supporting psychological evidence but a is little detail and no attempt to justify the points as for 7-8 marks but with only two points. points (best four) are made which are focused on the question and accurate. There is supporting psychological evidence with an attempt stify the points. There is increased detail but the range of arguments bited and there may be an imbalance. as for 9-10 marks but with only 3 points. nge of different points (best four) is made which are accurate and v understanding. Each point has appropriate supporting psychological ence. The arguments are well expressed, well considered, are need, and reflect understanding which extends beyond specific es. There may well be a consideration of the implications and effects. <b>Max mark</b>	1-2 3-4 5-6 7-8 9-10

Question	Description	Mark
Q7b	What problems may psychologists have when they investigate the nature/nurture debate?	1
	Emphasis on problem. Answers supported with named (or other) studie Each problem does not need a different study; can use same study. Indicative content: difficult to measure effect of experience before investigate problems with using animals including ethics, language barriers, ethnocentre	ation,
	in cross-cultural studies, other ethical issues etc.	
	For each point up to a maximum of FOUR points	
	Problem with study itself NOT related to investigating the nature/nurture debate.	0
	Identification of problem related to investigating the nature/nurture debate.	1
	Description of problem related to investigating the nature/nurture debate.	2
	Description of problem related to investigating the nature/nurture debate and applied effectively to study.	3
	Max mark	10
7c	How can findings about whether processes are learnt or innate be used in everyday life?	
	Emphasis on point. Answers supported with named study (or other) studies/evidence.	
	One or two general statements which may be inaccurate, incomplete or muddled.	1-2
	General statements are made which are focused on the question but are basic, lacking in detail and have no supporting evidence. For four marks there may be general statements with anecdotal evidence or vague reference to supporting psychological evidence.	3-4
	A number of points are made which are focused on the question and are generally accurate. There is some supporting psychological evidence but there is little detail and no attempt to justify the points. OR as for 7-8 marks but with only two points.	5-6
	Four points (best four) are made which are focused on the question and are accurate. There is supporting psychological evidence with an attempt to justify the points. There is increased detail but the range of arguments is limited and there may be an imbalance. OR as for 9-10 marks but with only 3 points.	7-8
	A range of different points (best four) is made which are accurate and show understanding. Each point has appropriate supporting psychological evidence. The arguments are well expressed, well considered, are balanced, and reflect understanding which extends beyond specific studies. There may well be a consideration of the implications and effects.	9-10
	Max mark	10

Question	Description	Marl
8a	To what extent does each of these studies have ecological validit Tajfel (intergroup categorisation) Dement and Kleitman (dreaming)	y?
	Haney, Banks and Zimbardo (prison simulation)	
	Rosenhan (sane in insane places)	
	Emphasis on study. Answers must be related to named studies.	
	One point from each study.	
	Indicative content: Milgram – artificial task i.e. giving electric shocks, labor	atory
	based so not an everyday situation but high experimental realism. Dement	
	Kleitman – do not normally sleep in a laboratory, woken by bells during nigl	ht
	may disturb sleep patterns. Zimbardo - prison was not real i.e. in baseme	nt of
	university, uniforms were very unrealistic but high experimental realism.	
	Rosenhan – high ecological validity – real settings/procedures.	
	For each point up to a maximum of FOUR points	
	For each point up to a maximum of four studies	
	No answer or incorrect answer.	0
	Identification of point relevant to question but not related to study or	1
	comment from study but no point about ecological validity.	
	Description of point about ecological validity (comment without comprehension).	2
	As above but with analysis (comment with comprehension) about	3
	ecological validity.	
	Max mark	10
8b	What problems may psychologists have when they try to	
	achieve ecological validity?	
	Emphasis on problem. Answers supported with named (or other) studie	es.
	Each problem does not need a different study; can use same study.	
	Indicative content: less control over extraneous variables in field experime	ients,
	ethics e.g. deception, debriefing, and consent, low experimental realism, lo	w
	mundane realism, demand characteristics etc.	
	For each point up to a maximum of FOUR points	
	Problem with study itself NOT related to ecological validity.	0
	Identification of problem related to ecological validity.	1
	Description of problem related to ecological validity.	2
	Description of problem related to ecological validity and applied	3
	effectively to study.	
	Max mark	10
