UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

International General Certificate of Secondary Education

MARK SCHEME for the May/June 2010 question paper for the guidance of teachers

0620 CHEMISTRY

0620/22

Paper 22 (Core Theory), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2010 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

	Page 2	Mark Scheme: Teachers' version Sylla		Paper		
		IGCSE – May/June 2010	0620	22		
1	(1	(i) titanium / vanadium / zirconium / niobium max [2] (1 mark each) allow: symbols				
	(ii) Na	a / Mg		[1]		
	(iii) so	dium / Na		[1]		
	(iv) po	tassiu / K		[1]		
	(v) va	nadium / V		[1]		
	(b) O ₂ correct	: balance		[1] [1]		
2	B: C:	giant ionic simple atomic simple molecular metallic		[1] [1] [1] [1]		
	(ii) B	and C (both needed for mark)		[1]		
	(b) solid; r	nolten;		[2]		
3		t / making ethanol / any other names large scale relevaking sulfuric acid	vant reaction	[1]		
		anhydrous cobalt chloride (paper); turns pink; ite / anhydrous copper sulfate; turns blue;		[2]		
		hted splint; ps / explodes;		[2]		
	(ii) pH	I 12		[1]		
	(d) (i) 3 ((CO ₂); 4(H ₂ O);		[2]		
	(ii) co	mbustion		[1]		
	(iii) 36	(mg)		[1]		

		IGCSE – May/June	2010	0620	22
		IOOOL - May/Julie	2010	0020	<u>LL</u>
4 (a)	Any 2 of: diffusion / ink particles move / water particles or molecules move / movement of particles is random /				[2]
(b)	two	two or more substances (together) that can be separated by physical means			
(c)	c) (i) ethanol allow: carboxylic acids			[1]	
	(ii)	oxidation state / third box down ticked	d		[1]
	(iii)	idea of small molecules / monomers long chains / large molecules formed		units;	[2]
(d)	(i)	ring around COOH group			[1]
	(ii)	removal of oxygen / decrease in oxid	ation number / add	lition of electrons	[1]
5 (a)		filtration / centrifugation allow: decanting			[1]
(b)	С				[1]
(c)	(i)	solvent shown in bottom of beaker; spot on the base line <u>vertically below</u> chromatography paper labelled anyw			[1] [1] [1]
	(ii)	4			[1]
(d)	(i)	A			[1]
	(ii)	bromine water; decolourises / goes colourless; allow: potassium manganate (VII); d	ecolourises;		[2]

Mark Scheme: Teachers' version

Syllabus

Paper

[1]

[1]

Page 3

(iii) substance containing carbon and hydrogen only

(iv) ethanoic acid

(v) alcohols / alkanols

6	(a)	conduct heat / conduct electricity / shiny / malleable / ductile max [2]	[2]
	(b)	4	[1]
	(c)	82 electrons 82 protons 126 neutrons	[1] [1] [1]
	(d)	lead + oxygen → lead(II) oxide	[1]
	(e)	(i) carbon	[1]
		(ii) gas at room temperature / third box down ticked	[1]
7	(a)	 (i) one of: BMF molecule and diamond a giant covalent structure / BMF has pentagonal (and hexagonal) structure diamond has bent hexagonal or tetrahedral structure / BMF each carbon joined to 3 others, diamond each carbon joined to four others / 	[1]
		(ii) two of: graphite has (flat) hexagonal rings, diamond has bent hexagonal rings or tetral graphite has 3 bonds to each carbon, diamond has 4 / graphite is layered diamond is not / graphite has two types of bonding / forces or weak and strong bonds whereas diamond has only one type of bond / covalent bonds only	
	(b)	covalent	[1]
	(c)	layers can slide over each other / forces weak between layers	[1]
	(d)	cutting / drilling allow: jewellery	[1]
	(e)	any 2 of: carbon dioxide is a greenhouse gas / absorbs infrared radiation / increases global warming / lead to climate change /	[2]
	(f)	any two of: sulfur reacts with oxygen (when coal burnt) / forms sulfur dioxide / sulfur dioxide reacts with oxygen (to form sulfur trioxide) / sulfur dioxide or trioxide dissolve in rain (to form acid) /	[2]

Mark Scheme: Teachers' version IGCSE – May/June 2010

Syllabus 0620 Paper 22

	Pag		1	Mark Scheme: Teachers' version	Syllabus	Paper
				IGCSE – May/June 2010	0620	22
	(g)	(i) waste gases from digestion in animals / second box down ticked				[1]
		(ii)	corre	ect dot and cross diagram for methane		[1]
		(iii)	etha	ane / propane / butane etc		[1]
8	(a)	cald	cium (oxide		[1]
	(b)	the	rmal (decomposition		[1]
	(c)	c) carbon dioxide has been removed from the limestone / it comes from the limestone				estone [1]
	(d)	neutralising acid soils / treating acidic lakes / flue gas desulfurisation etc			[1]	
	(e)	temperature of Bunsen / distance of Bunsen from the tube / amount or mass of carbonate used			of [1]	
	(f)	(i)	calci	ium		[1]
		(ii)	25 c	cm ³		[1]
		(iii) calcium faster than strontium which is faster than barium / idea of trend down the group;				
				ect trend i.e. less rapid reaction the further down th	e group; ORA	[2]
	(g)	bub	ble g	to carbonate; gas or carbon dioxide (evolved) through limewater /	test gas or carbor	١
		dioxide with limewater; limewater goes milky or cloudy;				[3]
