PHYSICS		0625/51
Paper 5 Practical Test October/November 20		
		1 hour 15 minutes
Candidates answer on the Question Paper.		
Additional Materials: As listed in the Confidential Instructions.		

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name in the spaces at the top of the page. Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs. Do not use staples, paper clips, glue or correction fluid. DO **NOT** WRITE IN ANY BARCODES.

Answer **all** questions. Electronic calculators may be used. You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [] at the end of each question or part question.

The syllabus is approved for use in England, Wales and Northern Ireland as a Cambridge International Level 1/Level 2 Certificate.

This document consists of **12** printed pages.

DC (LK/CGW) 95682/2 © UCLES 2015 1 In this experiment, you will investigate two different types of pendulum.

Carry out the following instructions, referring to Figs. 1.1, 1.2 and 1.3.

A pendulum has been set up for you as shown in Fig. 1.1.

(a) Adjust the pendulum until its length l = 50.0 cm. The length l is measured to the centre of the bob.

Explain briefly how you measured the length *l* as accurately as possible.

.....[1]

(b) (i) Displace the pendulum bob slightly and release it so that it swings.

Measure the time $t_{\rm S}$ for 20 complete oscillations of the pendulum (see Fig. 1.2).

*t*_S =[1]

(ii) Calculate the period $T_{\rm S}$ of the pendulum. The period is the time for one complete oscillation.

T_S =[2]

(iii) Explain why measuring the time for 20 swings, rather than for 1 swing, gives a more accurate value for $T_{\rm S}$.

.....[1]

- (c) The pendulum shown in Fig. 1.3 is a solid strip of length 50.0 cm. It has been set up for you.
 - (i) Displace this pendulum slightly and release it so that it swings.

Measure the time $t_{\rm C}$ for 20 complete oscillations of the pendulum.

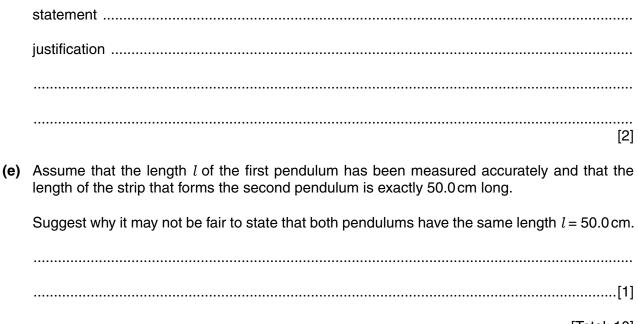

*t*_C =

(ii) Calculate the period $T_{\rm C}$ of the pendulum. The period is the time for one complete oscillation.

T_C =[2]

(d) A student suggests that $T_{\rm C}$ should be equal to $T_{\rm S}$.

State whether your results support this suggestion. Justify your answer by reference to the results.

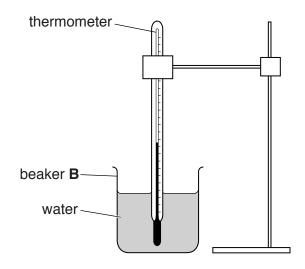

[Total: 10]

- 2 In this experiment, you will investigate the cooling of water.
 - (a) Measure the temperature $\theta_{\rm R}$ of the water in beaker **A**.

θ_R=[1]

(b) Pour 100 cm³ of hot water into beaker **B**. Place the thermometer in beaker **B**, as shown in Fig. 2.1.

(i) Record the temperature $\theta_{\rm H}$ of the hot water in beaker **B**.

θ_H =[1]

(ii) State one precaution that you took to ensure that the temperature reading is as reliable as possible.

.....[1]

(c) Add the water from beaker **A** to the hot water in beaker **B**. Stir briefly. Record the temperature θ_{M} .

θ_M=[1]

(d) Calculate the average temperature θ_A of the hot water and the cold water using the equation $\theta_A = \frac{(\theta_H + \theta_R)}{2}$.

θ_A =[2]

(e) A student carefully carries out this experiment and finds that θ_{M} is less than θ_{A} .

He was expecting that the temperature θ_M of the mixture would be the same as the average temperature θ_A of the hot water and cold water.

Suggest two factors that could cause $\theta_{\rm M}$ and $\theta_{\rm A}$ to be different.

(f) Fig. 2.2 shows a measuring cylinder.

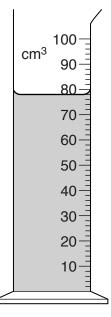

Fig. 2.2

Three students take the volume reading. Their readings are:

- Student 1: 80 cm³
- Student 2: 79 cm³
- Student 3: 78 cm³

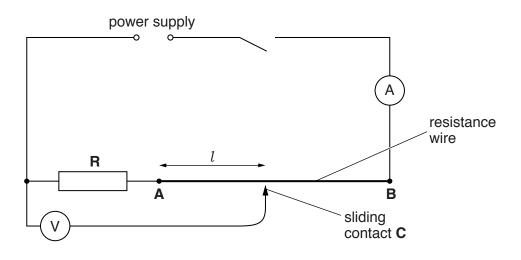

(i) State the correct reading.

	correct reading =
(ii)	Explain briefly the mistake made by one of the other students.
	Student is incorrect, because

[Total: 10]

3 In this experiment, you will determine the resistance of a resistor.

The circuit shown in Fig. 3.1 has been set up for you.

(a) (i) Switch on. Measure the current *I* in the circuit.

I =[1]

(ii) Place the sliding contact **C** at a distance l = 20.0 cm from **A**.

Measure, and record in Table 3.1, the reading on the voltmeter.

(iii) Repeat the procedure in (ii) using *l* values of 40.0 cm, 60.0 cm, 80.0 cm and 100.0 cm. Switch off.

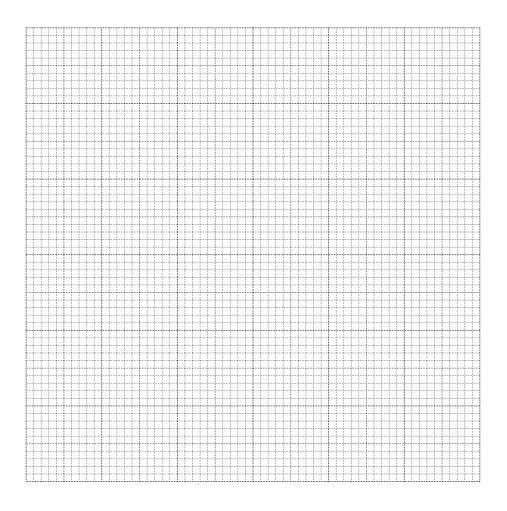

Table 3.1

l/cm	V/V
20.0	
40.0	
60.0	
80.0	
100.0	

[1]

(b) Plot a graph of V/V (y-axis) against l/cm (x-axis). Start both axes at the origin (0, 0).

9

[5]

(c) (i) Determine the value of the intercept Y on the y-axis.

Y =[1]

(ii) Calculate the ratio $\frac{Y}{I}$. The value of *I* is your answer to part (a)(i).

$$\frac{Y}{I} = \dots$$

(iii) $\frac{Y}{I}$ is numerically equal to the resistance *R* of the resistor **R**.

Write down a value for R to a suitable number of significant figures for this experiment. Include the unit.

R =

[Total: 10]

[Turn over

Carry out the following instructions, using the separate ray-trace sheet provided. You may refer to Fig. 4.1 for guidance.

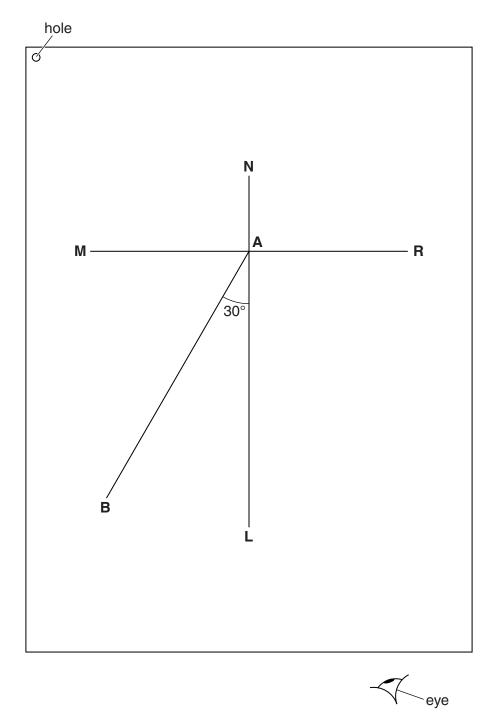

Fig. 4.1

- (b) Draw a line 8.0 cm long from **A** at an angle of incidence $i = 30^{\circ}$ to the normal, below **MR** and to the left of the normal. Label the end of this line **B**.
- (c) Place the reflecting face of the mirror vertically on the line MR.
- (d) Place a pin P_1 at point **B**, 8.0 cm from the point **A**.
- (e) Place pin P_2 on line **AB** a suitable distance from pin P_1 .
- (f) View the images of pins P_1 and P_2 from the direction indicated by the eye in Fig. 4.1. Place two pins P_3 and P_4 , a suitable distance apart, so that pins P_3 and P_4 , and the images of P_2 and P_1 , all appear exactly one behind the other. Label the positions of P_3 and P_4 .
- (g) Remove the pins and the mirror. Draw the line joining the positions of P₃ and P₄. Extend the line until it meets **NL**.
- (h) Measure, and record in Table 4.1, the angle *r* between NL and the line joining the positions of P_3 and P_4 .

Table 4.	1
----------	---

i/°	r /°
30	

[2]

- (i) Draw a second normal to line **MR**, 2.0 cm to the right of **NL**. Label the normal **XY**. Label the point at which **XY** crosses **MR** with the letter **C**. Draw the line **BC**. Measure, and record in the table, the angle *i* between **BC** and **XY**.
- (j) Place pin P_1 at point **B**. Place pin P_2 on line **BC** a suitable distance from pin P_1 .
- (k) Repeat the procedure in parts (f) and (g) using the new normal XY.
- (I) Measure, and record in the table, the angle *r* between **XY** and the line joining the new positions of P_3 and P_4 .
- (m) State two precautions that you took in this experiment in order to obtain reliable readings.

 (n) A student has done this experiment very carefully, taking these precautions.

She is disappointed to find that her lines for the reflected rays are not exactly where she predicts from the theory.

Suggest a practical reason for this.

Tie your ray-trace sheet into this Booklet between pages 10 and 11. [5]
