- **1 P** is a solution containing hydrochloric acid (HCl) or nitric acid (HNO<sub>3</sub>) or sulphuric acid (H<sub>2</sub>SO<sub>4</sub>). You are to identify the acid and determine its concentration by titration.
  - (a) Identification of the acid in P

Carry out the following tests on solution  $\mathbf{P}$  and record your observations in the table. You should test and name any gas evolved.

test no.	test	observations
1	To a portion of <b>P</b> , add an equal volume of aqueous sodium hydroxide and a small piece of aluminium foil. Warm <b>gently</b> .	
2	To a portion of <b>P</b> , add an equal volume of aqueous barium nitrate.	
3	To a portion of <b>P</b> , add an equal volume of aqueous silver nitrate.	

The acid present in <b>P</b> is[6]
------------------------------------

(b) **Q** is a solution of 0.100 mol/dm<sup>3</sup> sodium hydroxide. You are to determine the concentration of the acid in **P** as follows.

Fill the burette with solution **P**. Pipette a  $25.0 \text{ cm}^3$  (or  $20.0 \text{ cm}^3$ ) portion of **Q** into a flask and titrate with **P**, using the indicator provided.

Record your results in the table, repeating the titration as many times as you consider necessary to achieve consistent results.

### Results

Burette readings

titration number	1	2	
final reading / cm <sup>3</sup>			
initial reading / cm <sup>3</sup>			
volume of <b>P</b> used / cm <sup>3</sup>			
best titration results ( $\checkmark$ )			

## Summary

Tick  $(\checkmark)$  the best titration results.

Volume of solution **Q** used was ...... cm<sup>3</sup>. [12]

(c) **Q** is  $0.100 \text{ mol/dm}^3$  sodium hydroxide.

Using your results from (b), calculate the concentration, in mol/dm<sup>3</sup>, of the acid in P.

Concentration of acid in P is ..... mol/dm<sup>3</sup>. [2]

2 You are provided with three solutions **S**, **T** and **U**. Carry out the following tests and record your observations in the table.

4

test	11	
no.	test	observations with solution S
1	<ul> <li>(a) To a portion of the solution, add aqueous sodium hydroxide until a change is seen.</li> <li>Divide the mixture from (a) into two test-tubes.</li> </ul>	
	(b) Add excess aqueous sodium hydroxide to one of the test-tubes containing the mixture from (a).	
	(c) Add excess aqueous ammonia to the other test-tube containing the mixture from (a).	
2	To a portion of the solution, add an equal volume of dilute hydrochloric acid.	
3	To a portion of the solution, add an equal volume of aqueous potassium iodide.	

# Conclusion

Give the formulae of the cations (positive ions) present in any **two** of the solutions, stating which solution (S, T or U).

.....

5070/03/O/N/05

(i) The cation present in solution ..... is .....

is .....

## CHEMISTRY PRACTICAL NOTES

#### **Tests for anions**

anion	test	test result
carbonate ( $CO_3^{2-}$ )	add dilute acid	effervescence, carbon dioxide produced
chloride (Cl <sup>-</sup> ) [in solution]	acidify with dilute nitric acid, then add aqueous silver nitrate	white ppt.
iodide (I <sup>-</sup> ) [in solution]	acidify with dilute nitric acid, then add aqueous lead(II) nitrate	yellow ppt.
nitrate (NO <sub>3</sub> ) [in solution]	add aqueous sodium hydroxide then aluminium foil; warm carefully	ammonia produced
sulphate (SO <sub>4</sub> <sup>2-</sup> ) [in solution]	acidify with dilute nitric acid, then add aqueous barium nitrate	white ppt.

#### Tests for aqueous cations

cation	effect of aqueous sodium hydroxide	effect of aqueous ammonia
aluminium (Al <sup>3+</sup> )	white ppt., soluble in excess giving a colourless solution	white ppt., insoluble in excess
ammonium (NH <sub>4</sub> <sup>+</sup> )	ammonia produced on warming	-
calcium (Ca <sup>2+</sup> )	white ppt., insoluble in excess	no ppt. or very slight white ppt.
copper(II) (Cu <sup>2+</sup> )	light blue ppt., insoluble in excess	light blue ppt., soluble in excess giving a dark blue solution
iron(II) (Fe <sup>2+</sup> )	green ppt., insoluble in excess	green ppt., insoluble in excess
iron(III) (Fe <sup>3+</sup> )	red-brown ppt., insoluble in excess	red-brown ppt., insoluble in excess
lead(II) (Pb <sup>2+</sup> )	white ppt., soluble in excess giving a colourless solution	white ppt., insoluble in excess
zinc (Zn <sup>2+</sup> )	white ppt., soluble in excess giving a colourless solution	white ppt., soluble in excess giving a colourless solution

[Lead(II) ions can be distinguished from aluminium ions by the insolubility of lead(II) chloride.]

#### Tests for gases

gas	test and test result
ammonia (NH <sub>3</sub> )	turns damp red litmus paper blue
carbon dioxide (CO <sub>2</sub> )	turns limewater milky
chlorine (Cl <sub>2</sub> )	bleaches damp litmus paper
hydrogen (H <sub>2</sub> )	"pops" with a lighted splint
oxygen (O <sub>2</sub> )	relights a glowing splint
sulphur dioxide (SO <sub>2</sub> )	turns aqueous potassium dichromate(VI) from orange to green
