Paper 2 AS Structured Questions

May/June 2008

1 hour

Candidates answer on the Question Paper.

No Additional Materials are required.

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

# Data

| speed of light in free space, | $c = 3.00 \times 10^8 \mathrm{ms^{-1}}$                             |
|-------------------------------|---|
| permeability of free space,   | $\mu_0 = 4\pi \times 10^{-7} \mathrm{Hm^{-1}}$                      |
| permittivity of free space,   | $\varepsilon_0 = 8.85 \times 10^{-12}  \mathrm{F}  \mathrm{m}^{-1}$ |
| elementary charge,            | $e = 1.60 \times 10^{-19} \mathrm{C}$                               |
| the Planck constant,          | $h = 6.63 \times 10^{-34} \mathrm{Js}$                              |
| unified atomic mass constant, | $u = 1.66 \times 10^{-27} \text{ kg}$                               |
| rest mass of electron,        | $m_{\rm e} = 9.11 \times 10^{-31}  \rm kg$                          |
| rest mass of proton,          | $m_{\rm p} = 1.67 \times 10^{-27} \mathrm{kg}$                      |
| molar gas constant,           | $R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$                        |
| the Avogadro constant,        | $N_{\rm A} = 6.02 \times 10^{23}  \rm mol^{-1}$                     |
| the Boltzmann constant,       | $k = 1.38 \times 10^{-23} \mathrm{J}\mathrm{K}^{-1}$                |
| gravitational constant,       | $G = 6.67 \times 10^{-11} \mathrm{N}\mathrm{m}^2\mathrm{kg}^{-2}$   |

acceleration of free fall,

 $g = 9.81 \text{ m s}^{-2}$ 

### **Formulae**

| uniformly accelerated motion, | $s = ut + \frac{1}{2}at^2$ |
|-------------------------------|----------------------------|
|                               | $v^2 = u^2 + 2as$          |

work done on/by a gas, 
$$W = p\Delta V$$

gravitational potential, 
$$\phi = -\frac{Gm}{r}$$

hydrostatic pressure, 
$$p = \rho g h$$

pressure of an ideal gas, 
$$p = \frac{1}{3} \frac{Nm}{V} < c^2 >$$

simple harmonic motion, 
$$a = -\omega^2 x$$

velocity of particle in s.h.m., 
$$v = v_0 \cos \omega t$$

$$V=\pm \omega \sqrt{(X_0^2-X^2)}$$

electric potential, 
$$V = \frac{Q}{4\pi\varepsilon_0 r}$$

capacitors in series, 
$$1/C = 1/C_1 + 1/C_2 + \dots$$

capacitors in parallel, 
$$C = C_1 + C_2 + \dots$$

energy of charged capacitor, 
$$W = \frac{1}{2}QV$$

resistors in series, 
$$R = R_1 + R_2 + \dots$$

resistors in parallel, 
$$1/R = 1/R_1 + 1/R_2 + \dots$$

alternating current/voltage, 
$$x = x_0 \sin \omega t$$

radioactive decay, 
$$X = X_0 \exp(-\lambda t)$$

decay constant, 
$$\lambda \, = \frac{0.693}{t_{\scriptscriptstyle 1\!\!2}}$$

# Answer **all** the questions in the spaces provided.

| For        |
|------------|
| Examiner's |
| Hen        |

| 1 | Mal | ke reasonable estimates of the following qua    | antities.                        |
|---|-----|---|----------------------------------|
|   | (a) | the frequency of an audible sound wave          |                                  |
|   |     | fr  | equency = Hz [1]                 |
|   | (b) | the wavelength, in nm, of ultraviolet radiation | on                               |
|   |     | wav   | velength =nm [1]                 |
|   | (c) | the mass of a plastic 30 cm ruler               |                                  |
|   |     |   | mass = g [1]                     |
|   | (d) | the density of air at atmospheric pressure      |                                  |
|   |     |   | density = kg m <sup>-3</sup> [1] |

**2** A spring is placed on a flat surface and different weights are placed on it, as shown in Fig. 2.1.

For Examiner's Use

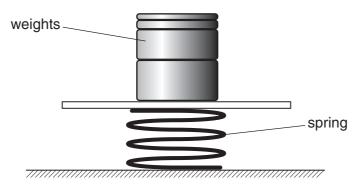

Fig. 2.1

The variation with weight of the compression of the spring is shown in Fig. 2.2.

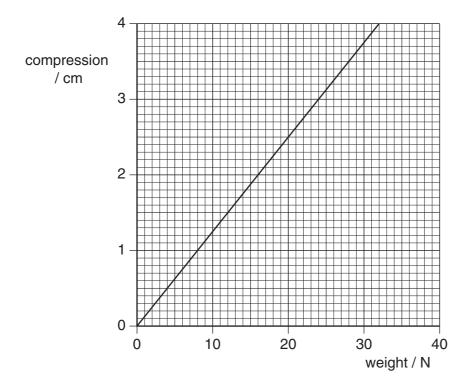

Fig. 2.2

The elastic limit of the spring has not been exceeded.

(a) (i) Determine the spring constant k of the spring.

 $k = \dots N m^{-1}$  [2]

(ii) Deduce that the strain energy stored in the spring is 0.49 J for a compression of 3.5 cm.

For Examiner's Use

[2]

(b) Two trolleys, of masses 800 g and 2400 g, are free to move on a horizontal table. The spring in (a) is placed between the trolleys and the trolleys are tied together using thread so that the compression of the spring is 3.5 cm, as shown in Fig. 2.3.

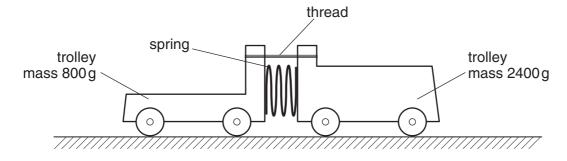

Fig. 2.3

Initially, the trolleys are not moving.

The thread is then cut and the trolleys move apart.

(i) Deduce that the ratio

speed of trolley of mass 800 g speed of trolley of mass 2400 g

is equal to 3.0.

[2]

(ii) Use the answers in (a)(ii) and (b)(i) to calculate the speed of the trolley of mass

For

| 800 g.                | Examiner's<br>Use |
|-----------------------|-------------------|
|                       |                   |
|                       |                   |

| speed = $ms^{-1}$ [3] |                   |
|                       |                   |

| 3 | alor | ng a | oing trolley and its contents have a total mass of 42kg. The trolley is being pushed horizontal surface at a speed of 1.2 m s <sup>-1</sup> . When the trolley is released, it travels a e of 1.9 m before coming to rest. | For<br>Examiner's<br>Use |
|---|------|------|--|--------------------------|
|   | (a)  | Ass  | suming that the total force opposing the motion of the trolley is constant,  |                          |
|   |      | (i)  | calculate the deceleration of the trolley,   |                          |
|   |      |      |  |                          |
|   |      |      |  |                          |
|   |      |      |  |                          |
|   |      |      | deceleration = ms <sup>-2</sup> [2]  |                          |
|   |      | (ii) | show that the total force opposing the motion of the trolley is 16 N.  |                          |
|   |      |      |  |                          |
|   |      |      |  |                          |
|   |      |      |  |                          |
|   |      |      | [1]  |                          |
|   | (b)  |      | ng the answer in <b>(a)(ii)</b> , calculate the power required to overcome the total force posing the motion of the trolley at a speed of 1.2 m s <sup>-1</sup> .  |                          |
|   |      |      |  |                          |
|   |      |      |  |                          |
|   |      |      |  |                          |
|   |      |      |  |                          |
|   |      |      | power = W [2]  |                          |
|   |      |      |  |                          |
|   |      |      |  |                          |

| (c) | The trolley now moves down a straight slope that is inclined at an angle of 2.8° to the horizontal, as shown in Fig. 3.1. | For<br>Examiner's<br>Use |
|-----|---|--------------------------|
|     |   |                          |
|     |   |                          |
|     | Fig. 3.1  |                          |
|     | The constant force that opposes the motion of the trolley is 16 N.  |                          |
|     | Calculate, for the trolley moving down the slope,   |                          |
|     | (i) the component down the slope of the trolley's weight,   |                          |
|     |   |                          |
|     |   |                          |
|     |   |                          |
|     |   |                          |
|     |   |                          |
|     | component of weight = N [2]   |                          |
|     | (ii) the time for the trolley to travel from rest a distance of 3.5 m along the length of the slope.                      |                          |
|     |   |                          |
|     |   |                          |
|     |   |                          |
|     |   |                          |
|     |   |                          |
|     | time =s [4]   |                          |
| (d) | Use your answer to <b>(c)(ii)</b> to explain why, for safety reasons, the slope is not made any steeper.                  |                          |
|     |   |                          |
|     | [1]   |                          |
|     |   |                          |
|     |   |                          |

| 4 | (a) | (i)  | Define the terms  |
|---|-----|------|---|
|   |     |      | 1. tensile stress,  |
|   |     |      |   |
|   |     |      | [1]   |
|   |     |      | 2. tensile strain,  |
|   |     |      |   |
|   |     |      | [1]   |
|   |     |      | 3. the Young modulus.   |
|   |     |      |   |
|   |     |      | [1]   |
|   |     | (ii) | Suggest why the Young modulus is not used to describe the deformation of a liquid or a gas.   |
|   |     |      |   |
|   |     |      | [1]   |
|   | (b) |      | change $\Delta V$ in the volume $V$ of some water when the pressure on the water increases $\Delta p$ is given by the expression                      |
|   |     |      | $\Delta p = 2.2 \times 10^9 \; \frac{\Delta V}{V},$   |
|   |     | In n | ere $\Delta p$ is measured in pascal. nany applications, water is assumed to be incompressible. reference to the expression, justify this assumption. |
|   |     |      |   |
|   |     |      |   |
|   |     |      | [2]   |

|   |     | <b>†</b>               |  |  |  |
| 2 |     | <b>_</b>               | oscillator   |  |  |
|   |     |                        | Fig. 5.1   |  |  |
|   |     |                        | frequency of oscillation is varied and, at one value of frequency, the wave formed he string is as shown in Fig. 5.1.                                    |  |  |
|   |     | (i)                    | Explain why the wave is said to be a stationary wave.  |  |  |
|   |     |                        | [1]  |  |  |
|   |     | (ii)                   | State what is meant by an antinode.  |  |  |
|   |     |                        |  |  |  |
|   |     |                        | [1]  |  |  |
|   |     | (iii)                  | On Fig. 5.1, label the antinodes with the letter A. [1]  |  |  |

| (c) | A weight of 4.00 N is hung from the string in (b) and the frequency of oscillation is     |
|-----|---|
|     | adjusted until a stationary wave is formed on the string. The separation of the antinodes |
|     | on the string is 17.8 cm for a frequency of 125 Hz.                                       |

The speed v of waves on a string is given by the expression

$$v = \sqrt{\frac{T}{m}} ,$$

where T is the tension in the string and m is its mass per unit length. Determine the mass per unit length of the string.

mass per unit length = .....  $kg m^{-1}$  [5]

6 An electric heater consists of three similar heating elements A, B and C, connected as shown in Fig. 6.1.

For Examiner's Use

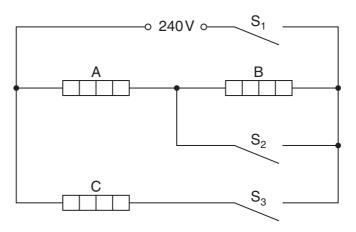

Fig. 6.1

Each heating element is rated as 1.5 kW, 240 V and may be assumed to have constant resistance.

The circuit is connected to a 240V supply.

(a) Calculate the resistance of one heating element.

resistance = .....  $\Omega$  [2]

© UCLES 2008

(b) The switches  $S_1,\,S_2$  and  $S_3$  may be either open or closed.

For Examiner's Use

Complete Fig. 6.2 to show the total power dissipation of the heater for the switches in the positions indicated.

| S <sub>1</sub> | S <sub>2</sub> | S <sub>3</sub> | total power / kW |
|----------------|----------------|----------------|------------------|

Permission to reproduce items where third-party owned material protected by copyright is included has been sought and cleared where possible. Every reasonable effort has been made by the publisher (UCLES) to trace copyright holders, but if any items requiring clearance have unwittingly been included, the publisher will be pleased to make amends at the earliest possible opportunity.

University of Cambridge International Examinations is part of the Cambridge Assessment Group. Cambridge Assessment is the brand name of University of Cambridge Local Examinations Syndicate (UCLES), which is itself a department of the University of Cambridge.
