MARK SCHEME for the October/November 2012 series

9702 PHYSICS

9702/33

Paper 3 (Advanced Practical Skills 1), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2012 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

	Page 2			Mark Scheme	Syllabus							
				GCE AS/A LEVEL – October/November 2012	9702	33						
1	(b)	(i)	Valu	e of <i>h</i> in range $0.085 \mathrm{m} \le h \le 0.095 \mathrm{m}$ consistent with u	nit.	[1]						
	(c)			<i>T</i> in range $0.6 s \le T \le 1.5 s$ consistent with unit. e of repeats.		[1] [1]						
	(d)	Six sets of readings of h and T or raw times scores 4 marks, five sets scores 3 marks Help from Supervisor –1.										
		Ran	[1]									
		Column headings: Each column heading must contain a quantity and a unit where appropriate. The unit must conform to accepted scientific convention e.g. T^2h / s^2m (or ms ²) ar h^2/m^2 .										
			sistei aw va	ncy: alues of <i>h</i> must be given to the nearest mm.		[1]						
		Significant figures: All values of h^2 must have the same number of significant figures as, or one more than, t number of significant figures in <i>h</i> .										
		Calc Valu	[1]									
	(e)		Scale both Scale	s: sible scales must be used, no awkward scales (e.g. 3:10 es must be chosen so that the plotted points occupy at l x and y directions. es must be labelled with the quantity that is being plotted e markings must be no more than three large squares a	east half the g d.	[1] raph grid in						
			All ol Diarr Cheo	ing of points: bservations in the table must be plotted on the graph gri neter of plots must be \leq half a small square (no "blobs") ck that the points are plotted correctly. Work to an accur the <i>x</i> and <i>y</i> directions.		[1] mall square in						
			scatt	lity: oints in the table must be plotted (at least 5) for this mar er of all the points about a straight line. oints must be within ± 0.0025 m² (25 cm²) in the <i>h</i> ² direct								
			Judg Ther Allov	of best fit: Je by balance of all the points on the grid (at least 5) abo The must be an even distribution of points either side of th In <u>one</u> anomalous point only if clearly indicated (i.e. circle lidate. Line must not be kinked or thicker than half a sma	e line along th ed or labelled)	e full length.

(g)

	(i) Limitations 4 max.	(ii) Improvements 4 max.	Do not credit	
A	two readings not enough (to draw a conclusion)	take many readings (for different masses) <u>and</u> plot a graph /calculate more <i>v</i> values and <u>compare</u>	 'repeat readings' /few readings /take more readings and calculate average v 	
В	the car does not travel in a straight line	method of determining the distance e.g. video + scale/method of marking a path /method of guiding trolley in straight line		
С	times are short /large uncertainty in <i>t</i>	use a longer slope /use a steeper slope	trolley too fast	
D	difficult to judge when trolley stopped/ difficult to start the stopwatch <u>when</u> all wheels on bench/ <u>when</u> trolley at B/ <u>when</u> trolley horizontal	improved method of timing eg video <u>with</u> timer or frame by frame/motion sensor placed at end of path/ticker tape timer	light gate(s) /reaction time /human error	
E	there is a drop when the trolley reaches the end of the board/at B there is a loss of velocity/kinetic energy	method to smooth transition e.g. thinner board/bevelled edge/thin card placed at transition		
F	difficult <u>to release</u> without applying a force/ velocity /difficult to position head at B after releasing trolley A	method of releasing trolley e.g. card/barrier or electromagnet	air resistance	
G	calculation of <i>x</i> doesn't take back of trolley into account	detailed method of measuring from wheel to the back of the trolley	measuring <i>l</i>
