## **CAMBRIDGE INTERNATIONAL EXAMINATIONS**

GCE Advanced Subsidiary Level and GCE Advanced Level

## MARK SCHEME for the October/November 2012 series

## 9702 PHYSICS

9702/35

Paper 3 (Advanced Practical Skills 1), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2012 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

|     |            | GOL AGIA LEVEL GOLOGETHIOVEHIGH ZOTZ GTOZ  | 00                |
|-----|------------|--|-------------------|
| (a) | (iv)       | Value for $I_1$ < 200 mA, with consistent unit.  | [1]               |
|     | (v)        | Value for $I_2$ with unit of current.<br>$I_2 > I_1$   | [1]<br>[1]        |
| (b) | Inc        | sets of readings of $I_1$ , $I_2$ and $x$ scores 4 marks, five sets scores 3 marks etc. orrect trend $-1$ . jor help from Supervisor $-2$ . Minor help from Supervisor $-1$ .  | [4]               |
|     | Rai        | nge: $x_{\text{max}} - x_{\text{min}} \ge 0.500 \text{m}$ .  | [1]               |
|     | Ead<br>The | lumn headings: ch column heading must contain a quantity and a unit where appropriate. e unit must conform to accepted scientific convention $I/A$ or $I(A)$ , $1/x$ (m <sup>-1</sup> ), $I_1/I_2$   | [1]               |
|     |            | nsistency: values of $x$ must be given to the nearest mm.  | [1]               |
|     | All        | pnificant figures: values of $I_2/I_1$ must have the same significant figures as, or one more than, the st number of significant figures in raw $I_1$ and $I_2$  | [1]               |
|     |            | lculation:<br>lues of $I_2/I_1$ calculated correctly.  | [1]               |
| (c) | (i)        | Axes: Sensible scales must be used, no awkward scales (e.g. 3:10). Scales must be chosen so that the plotted points occupy at least half the grap both <i>x</i> and <i>y</i> directions. Scales must be labelled with the quantity that is being plotted. Scale markings must be no more than three large squares apart. | [1]<br>Oh grid in |
|     |            | Plotting of points: All observations in the table must be plotted on the graph grid. Diameter of plots must be $\leq$ half a small square. Check that the points are plotted correctly. Work to an accuracy of half a small sboth the $x$ and $y$ directions.  | [1]<br>square in  |
|     |            | Quality: All points in the table must be plotted (at least 5) for this mark to be scored. Judg scatter of all the points about a straight line. All points must be within $\pm$ 0.25 m <sup>-1</sup> in the 1/ $x$ direction of a straight line.   | [1]<br>ge by the  |
|     | (ii)       | Line of best fit: Judge by balance of all the points on the grid (at least 5) about the candidate's li There must be an even distribution of points either side of the line along the full I Allow one anomalous point only if clearly indicated (i.e. circled or labelled) by the candidate.                            | length.           |
|     |            | Line must not be kinked or thicker than half a small square.   |                   |

|---|---|---|----------------|---|--------------------------------|--------------|--|
|   |   |   |                | GCE AS/A LEVEL – October/November 2012  | 9702                           | 35           |  |
|   |   | (iii) Gradient:  The sign of the gradient must match the graph.  The hypotenuse of the triangle used must be greater than half the length of the drawn line.                  |                |   |                                |              |  |
|   |   | Both read-offs must be accurate to half a small square in both the <i>x</i> and <i>y</i> directions. The method of calculation must be correct.  y intercept: Either:         |                |   |                                |              |  |
|   |   |   |                |   |                                |              |  |
|   |   | Correct read-off from a point on the line and substitution into $y = mx + c$ .<br>Read-off must be accurate to half a small square in both the $x$ and $y$ directions.<br>Or: |                |   |                                |              |  |
|   | Correct read-off of the intercept directly from the graph.  |   |                |   |                                |              |  |
|   | (d) Value of P = candidate's gradient and value of Q = candidate's intercept.<br>Do not allow a value presented as a fraction.  |   |                | [1]   |                                |              |  |
|   | Unit for P (m or cm or mm, consistent with value) and Q (no unit) correct.  |   |                |   | [1]                            |              |  |
|   | [Total: 2   |   |                |   |                                |              |  |
| 2 | (a) (i) Value for <i>D</i> in range 10 to 20 mm to the nearest mm, with unit.   |   |                | [1]   |                                |              |  |
|   | (ii) Percentage uncertainty in <i>D</i> based on an absolute uncertainty of 0.5, 1, 2 or 3 If repeated readings have been taken, then the absolute uncertainty can be harange. Correct method used to calculate the percentage uncertainty. |   |                |   |                                |              |  |
|   | (b)   | (ii) Value of $x$ to the nearest mm, in range 1.3 – 1.7 cm, with unit.  |                | [1]   |                                |              |  |
|   | (iii) Correct calculation of V with consistent unit.  |   | [1]            |   |                                |              |  |
|   | (c)   | (c) (iv) Raw time values to 0.1s or 0.01s. Value of <i>T</i> in range 0.1 – 1.0s.   |                | [1]   |                                |              |  |
|   | Evid  |   | Evid           | ence of repeat measurements.  |                                | [1]          |  |
|   | (d) (iv) Second value of x.   |   |                | [1]   |                                |              |  |
|   | (e)   | e) Second value of T.   |                |   |                                | [1]          |  |
|   |   | Second value of $T < $ first value of $T$ .   |                |   | [1]                            |              |  |
|   | (f)   | (i)   | Corre          | ect calculation of two values of k.   |                                | [1]          |  |
|   |   | (ii)  |                | fication of significant figures in $k$ linked to significant figures "raw readings"). | ures in <i>D, x</i> <u>and</u> | time<br>[1]  |  |
|   |   | (iii)   | Sens<br>criter | sible comment relating to the calculated values of $k$ , test rion.                   | ting against a s <sub>l</sub>  | pecified [1] |  |
